Experience Summary:

Before my 39 years of Construction Industry experience, I first served in the US Air Force during the Vietnam Era. These 4 years in the USAF built self-discipline and created honesty and integrity needed in our today's construction environment. After serving in the military, I attended the University of Nebraska to acquire an Engineering degree. During this time, I worked doing surveying for the City of Omaha, Nebraska and later detailing construction plans for a local concrete pre-caster.

After graduation for the next 39 years my experience grew with building many infrastructure construction projects that included Hydro Electric Power plants, Coal Fired plants, Water and Wastewater facilities, Bridge and Roadway Transportation projects, Airport improvements, and Theme Parks. These projects were labeled Heavy and Highway markets in Kansas, Missouri, Texas, Alabama, and Florida.

Working in many states and with different team members I developed special skills and the ability to manage people and use good judgement to solve issues and mitigate potential problems and claims.

My experience in Field Engineering, Quality Assurance, Estimating, Scheduling, Project Coordination, and the Business aspect for a major construction company is found on years of hands-on knowledge and personal participation in the field work.

The reputation in Florida and throughout my career, I was an individual for being fair and doing what is right for all team members concerned.

After retirement from Lane Construction in July 2017, I started a Construction Consulting Service. This Independent Service provided Engineering, Construction Reviews, Estimating, and Dispute Resolutions to a Construction based client. The past 8 years' activity has been dedicated to the Florida Dispute Resolution Boards listed as follows:

Owner / Contractor / Project / Years / DRB Position ** Active Projects

CFX / Hubbard Construction / University SR 417 Improvements / 2018-2020 / Chairperson
