Hey Scott,

Thank you so much for your call and help yesterday understanding the below comments. I believe we have addressed everything in the attached updated submittal. If you need anything else, please let me know!

Thank you,  
John

Hey Scott,

I talked with Erica regarding the below and I think we are aligned, but I have a few questions regarding any updates we need to make to the SDS Standard Details.

Please see my responses below in blue. If you would like to discuss in more detail, please feel free to give me a call!

Thank you,  
John

Erica,

Following are my comments on your SDS pole, base, and foundation details.

1. For wind load application, your structural support may be considered a “Roadside sign structure” with a 10-year design life. See Section 3.8, Volume 3, FDOT Modifications to LRFDLTS-1.

It is my understanding that this is a less-stringent requirement. In an effort to get this approved more quickly, can we reference the “Roadside Sign Structure” without changing our structural calculations and/or design? I understand this will be a conservative approach, but changing the design will take some time.

**Yes, using the “Roadside Sign Structure” classification results in a lower design wind speed. You can stick with the design you have for now and submit a new design later using the lower wind speed if you choose to.**

2. If your structure is reasonably similar to one of our structures in the FDOT Standard Plans that has already been crash tested, your structure may not require crash testing. Examples include Standard Index 654-001, Rectangular Rapid Flashing Beacon, or Standard Index 700-120, Enhanced Highway Signing Assemblies. I will review your revised plans and make that determination.

Based on the conversation with Erica, it sounds like the initial thought was that our structure is similar to the FDOT Standard. Can we leave it as is, or do we need to change to the FDOT specific structure?

**Yes, I consider your structure to be reasonably similar to Index 654-001. As we discussed, please raise the Ancillary Equipment Enclosure to a minimum height of 7'-0” above finish grade.**

3. The breakaway transformer base must be specified from the FDOT Approved Products List. The APL may be found here <https://path.fdot.gov/Specifications>  
I don't believe we call out a transformer base on our plans. Do we need to add this detail? If so, which specific detail should we provide?

We navigated to the APL website and you indicated you would specify the pole base on the plans.

4. It is very unlikely that a spread footing will be a viable option, due to utility conflicts. It is generally easier to fit in a small shaft foundation.

This type of foundation would only be used in very extreme circumstances where utilities prevent the use of a drilled shaft. Can we add a note here to add conditions to this use (i.e. “only to be used in extreme utility conflict situations and with the approval of FDOT and the local AHJ”)?

No concern with leaving the spread footing details in the plans.

Please contact me anytime if you have questions.

Hello Erica,

We have observed the following inconsistencies based on our very-high-level quick review on general notes (not the details). Please address the issues and send us an update.

- Sheet 2 is missing.
- Multiple sheets have the same sheet numbering (e.g., Sheet 3 for Sheets 3 – 5).
- Some references are either outdated or not specific to Speed Detection System (SDS).
  - “January 2022 Standard Specifications for Road and Bridge Construction” is not the latest document and should not be the governing standard specifications.
  - “FDOT Design Standard (Current Edition)” or “FDOT Latest Design Standards” is an old reference. The name was changed to “FDOT Standard Plans” and the latest edition of FDOT Standard Plans should be followed for corresponding installations.
  - "TRAFFIC INFRACTION DETECTOR PLACEMENT AND INSTALLATION SPECIFICATIONS", is not the correct sign. The SDS-related sign assembly is called “Speed Limit Photo Enforced Sign Assembly”.

Thank you,

Erica,

You would need to submit your SDS structure to our Central Office Maintenance team for review and approval. Upon approval for any structure, it will be placed on the website with a link to the approved plan(s). Please use the link below for the Placement and Installation Specifications and the Special Provisions for the General Use Permit.

[School Zone Speed Detection System](#)

If you'd like, you can send me your SDS Plan(s) for review and submittal and we will get them to the correct individuals.

Thank you,

**EXTERNAL SENDER:** Use caution with links and attachments.

Hello Derek,

Verra Mobility submitted applications for SDS cameras in the Tampa area recently and we just received comments back from FDOT that we are not an approved SDS vendor. Is that a new requirement? If so, how do we become an approved vendor? I have attached plans and calcs for these systems, as we have them prepared due to being a current TID/RLRC vendor. Is anything else required for review in order to be considered? Please let me know if you have any questions or need any additional information.
